

Basic encoder mounted NC Rotary Table

- We offer high-precision encoder-equipped NC rotary tables at competitive prices.

Features

- Low maintenance:
Eliminates the need for maintenance such as backlash adjustment and pitch error compensation, reducing machine downtime.
- Stable machining:
Directly detects the index position of the table, improving positioning repeatability.
Even with eccentric-loaded jig work, it can assure of stability.
- Excellent cost performance:
More affordable than conventional encoder specifications.
- Variety of specifications:
A rotary joint can be equipped. ※Please contact us for more information.

NC rotary table with an encoder mounted

Accuracy improvement

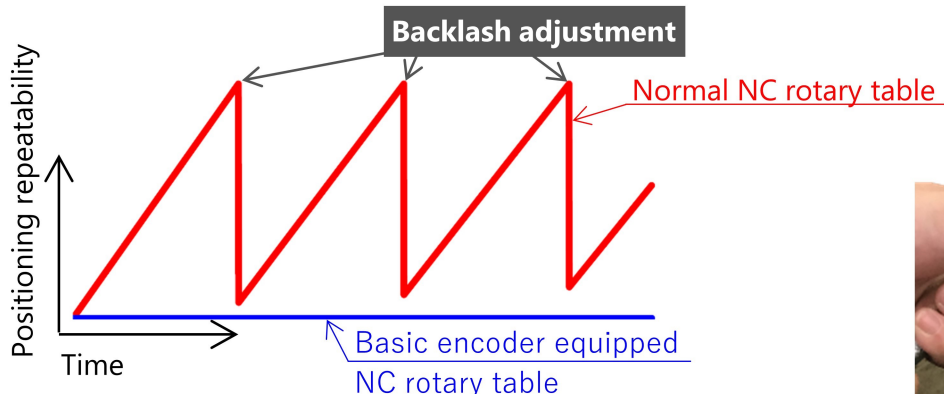

Normal NC rotary table
Indexing accuracy: 20 sec

Basic encoder mounted
NC rotary table
Indexing accuracy: 10 sec

An encoder-equipped NC rotary table eliminates the need for tedious backlash adjustment and pitch error compensation throughout its lifetime.

Time variation of positioning repeatability

Applicable NC rotary table

MK200, 250, 350

CK160, 200

RK201

TT140, 182, 200

The encoder can only be mounted on a tilting axis.

RKT500

The encoders can be mounted on both a tilting axis and a rotating axis.

Mounting example for MK200
