Notes : 1. The electrode probe on master side strokes 1.5mm (※2) when connecting with KWR.

When fixing the cable, make sure there is enough space for the probe operation.

2. The electrode stays connected when released, because its connecting stroke requires 1.5mm which is longer than KWR lift stroke.

※3. The optional cable and terminal are not included in the electrode. Please prepare them separately.

【Notes on Wire/Cable Procedure and Wiring】

- Make sure to fix the wire and cable so that they are not pulled while a robot is moving or turning around.
External force should not be applied on the connector part since it leads to breaking of wire, detaching of connector and contact failure.
However, the electrode probe on master side strokes 1.5mm when connecting with KWR. When fixing the cable, make sure there is enough space for the probe to stroke.

- As for Compact Electric Power Transmission option, the electrode probes on both master cylinder and tool adaptor are exchangeable.
The electrode probes will be fallen out if pushed from the cable connecting side with power stronger than a certain level.
In case the electrode probes are pushed out after connecting the cable, make sure to push them back from the seating surface side before use.
